

LAB ASSIGNMENT II
NATURAL LANGUAGE PROCESSING LAB (PMDS606P)
CLASS ID - VL2025260105170

MAXIMUM MARKS: 10

DUE DATE: 30 AUGUST 2025

Problem Statement:

“Write a program to classify contexts involving the word 'must' according to the tag of the following word.”

This means:

1. You are given some sentences.
2. Whenever the word 'must' appears, look at the next word.
3. Check what type of word (noun, verb, adjective, etc.) that next word is.
4. Classify how 'must' is being used based on that.

Examples

Example 1:

Sentence: You must go now.

- After 'must' comes 'go'.
- 'go' is a verb.
- So 'must' is followed by a verb → expressing obligation.

Example 2:

Sentence: She must have finished her work.

- After 'must' comes 'have'.
- 'have' is a verb.
- So this is a (modal + perfect verb construction) modal perfect usage.

Example 3:

Sentence: These are must things to carry.

- After 'must' comes 'things'.
- 'things' is a noun.
- So 'must' is used like an adjective (important things).

In short:

The task is to find the word 'must', check the following word, identify its type (verb, noun, adjective, etc.), and then decide how 'must' is being used in that context.
